

Medical Lab Report

Patient Name: Jane Smith

Age: 32

Gender: Female

Date: 28th November 2024

Report Summary:

■ The patient, a 32-year-old female, has been experiencing various symptoms for the past week.

Symptoms:

- Persistent fever (103°F)
- Severe headache
- Dizziness
- Shortness of breath
- Muscle aches

Medical History: Occasional vomiting

No significant medical history except for mild asthma, well controlled with medication. No known allergies.

- Chest tightness

Preliminary Diagnosis:

Upper respiratory infection suspected, with possible COVID-19. PCR test recommended.

Additional Observations:

Mild wheezing, no signs of pneumonia. Oxygen saturation: 98%. Mild tachypnea observed.

Suggested Follow-up:

Further testing advised: PCR for COVID-19, chest X-ray, blood count. Symptom management and hydration.

Doctor's Note:

Observe for worsening symptoms. Follow isolation if COVID-19 positive. Initiate appropriate treatment if confirmed.

Doctor: Dr. Michael Johnson

Specialization: Infectious Disease Specialist
